EDUCATION

Purdue University Fort Wayne – B.S. Computer Science | GPA: 3.97/4.0 | Fort Wayne, IN *August 2023 — Expected May 2027*

Honors and Activities: Chapman Scholar (full-ride merit scholarship), LEAD Mentor (peer mentorship program)

SKILLS

Languages: TypeScript, Python, Java, C, JavaScript, Bash, SQL, HTML, CSS

Cloud, DevOps & Infrastructure: Harness, Docker, Kubernetes, GCP (GKE/GCE/GCS), NGINX, CI/CD, GitHub Actions, Datadog, Proxmox, Observability

Backend & Systems: Node.js, Express.js, Flask, REST APIs, Distributed Systems, Linux/Unix, Observability, Git

Frontend & Mobile: React, Next.js, React Native, Angular

Databases: MySQL, MongoDB, SQLite, NoSQL

EXPERIENCE

Software Engineering Intern

May 2026 — August 2026

PayPal | Austin, TX

- Architected and deployed PayPal's first agentic CI/CD diagnostics engine in TypeScript, ingesting telemetry data across Harness, GitHub, Datadog, and Confluence to automate root-cause remediation and reduce manual support escalations across teams.
- Shipped a CLI and full-stack web application for self-service pipeline debugging across 10+ engineering teams, supporting 100+ diagnostic sessions and achieving 85% root-cause identification accuracy during alpha testing.
- Engineered a stateful agent orchestration layer using an MCP architecture to resolve complex pipeline failures, dynamically routing across 170+ custom-built diagnostic tools, including configuration drift detection, execution analysis, and infrastructure validation.
- Partnered with Harness platform teams to create the first catalog of 40+ CI/CD failure patterns for Harness's error-classification initiative and implemented pipeline-ownership classification for downstream reliability and operational metrics.

Software Development Intern

May 2025 — August 2025

Medical Informatics Engineering | Fort Wayne, IN

- Spearheaded and released a company-wide virtualization management platform using Proxmox VE, enabling 30+ company developers to quickly deploy over 75+ containers in isolated environments, accelerating testing cycles across internal teams.
- Automated self-hosted runner and container provisioning with a custom GitHub Actions CI/CD pipeline, reducing manual environment setup time by 30% across development teams.
- Integrated custom security and threat mitigation rules and active response scripts into our cluster using Wazuh, reducing SSH brute-force attack volume by 99.3%.

Software Development Intern

May 2024 — August 2024

Medical Informatics Engineering | Fort Wayne, IN

- Developed WebChart Go, a mobile application using React Native and Expo, enabling secure authentication and streamlined patient management across WebChart portals.
- Optimized WebChart chart exporting with multi-threading, improving upload speed by 90% in high-volume patient data handling.
- Designed a reusable Node.js NPM package for WebChart EHR integration, enabling scalable management of 100,000+ records.
- Prototyped a low-latency, proximity-based audio-conferencing application using React Native and the Opus codec, optimizing audio buffer encoding/decoding parameters over UDP/mDNS.

Web Development and Design Intern

June 2022 — December 2022

CodeClouds | Fort Wayne, IN

- Created and deployed 5+ client websites using HTML, CSS, and JavaScript, including the [Arise Church](#) website with embedded newsletters, live sermon streams, and interactive donation cards, ensuring mobile responsiveness and improved UX across builds.

PROJECTS

Big Blue Golf | *Flask, SQLite, HTML, CSS, JavaScript* | [GitHub](#)

- Led development and deployment of a Flask/SQLite live-scoring platform for high school golf tournaments, supporting 10+ events and 150+ players with real-time leaderboards, event creation, and spectator-facing score sharing.
- Optimized backend data flow and query handling to deliver leaderboard updates and live scoring reports to 2,000+ spectators.

Summify | *Node.js, Flask, JavaScript, Gemini API* | [Chrome Web Store](#), [GitHub](#)

- Built and published a [Featured](#) Chrome Extension with 600+ active users, processing 200+ daily summarization requests across web pages and YouTube videos using a Node.js/Flask backend and Gemini API for multilingual content extraction and summarization.
